

VENERA SWAP

Decentralized Financial
Ecosystem

VENERA SWAP

VeneraSwap's goal is restoring user's faith in the BSC network and DeFi with incentivized revenue sharing by using an AMM model

Venera Swap protocol provides users with a unique trading, staking and farming experience. First of its kind on BSC network.

Any users of the DEX will enjoy the Venera Swap experience thanks to the unique financial ecosystem, powered by the BSC network, with future expansion onto other blockchains.

A one-stop-shop for DeFi.

**By using Venera Swap,
you can get a lot of
benefits:**

Earn a percentage of each swap as LP token holder as well as earning VSW native token as an incentive by staking the LP token in Normal farms, or Boosted Farms

Lock VSW in return for iVSW and enjoy benefits such as:

- 1- Governance : The ability to vote on farms emission
- 2- Boosting: Boost your farm upto 2.5x from the original APR.
- 3- Earn weekly revenue from the revenue generated Venera Swap

Buy-Back mechanism:
Most of the generated revenue from swaps, referrals, deposit fees will be used to market buy VSW and distribute it to iVSW holders.

Earn upto 7% rewards by using your unique referral code

Single Staking pool for projects to list on and reward their users with VSW.

Venera Swap also has excellent features:

Trade/Swap – Users can swap tokens on BSC via automated liquidity pools of Venera Swap. Every swap on Venera Swap incurs a 0.25% fee. 5/6 goes to LP holders and 1/6 goes to iVSW holders and the DAO treasury

Liquidity – Venera Swap offers users a simple way to provide liquidity for tokens on BSC via automated liquidity pools (LPs). Users earn from the fees incurred from the swaps by providing liquidity, as well as staking LP tokens in Normal or Boosted farms

Boosted farms: Inspired by Curve Finance veCRV, Pickles Finance DILL, and SpiritSwap inSpirit model. iVSW will be the governance token for Venera that will be formulated on a vote locking model. iVSW holders will be able to get enhanced rewards, the power to vote as well as harvest the protocols profits.

iVSW holders get to lock their VSW tokens for up to 4 years. The longer the period, the higher the ratio. iVSW holders enjoy boosting their farms up to a factor of 2.5x, voting on token emission and earning on a weekly basis.

Bribe wars:
Boosting farms and the ability to vote on emissions as a user will incentivize other projects to bribe iVSW holders in order to direct their votes towards their farms. Users enjoy both a boosted farm and a bribe from other projects who will compete against each other for the highest APR.

Referral: Share your unique referral link, invite your friends, and earn 7% from the referee's farms.

iVSW & Boosted Farms

VeneraSwap's long term aim is to become a DAO and by implementing iVSW it will give users the chance to decide what will happen to the project. Holding iVSW allows you to have a vote on pool allocations every week which changes the APY directly. We will call those boosted farms. So what are boosted farms compared to "farms"? They are similar to regular farms, however the emission rate can be decided by voting using the iVSW. Boosted farms will have a 1% deposit fee (0.8% goes to holders and 0.2% goes to development funds). The 0.8% fee is used to buy back VSW and distribute them back to iVSW holders on weekly basis.

Voting: Holding 1 iVSW give the user 1 vote which can be used once a week to vote on farms emission, allocation as well as vote on improvement proposals for the project.

In order to obtain iVSW, the users must lock their VSW for a defined time which is set by the user. The timeframe for locking is between 7 days to 4 years. The more time a user locks their VSW, the great amount of iVSW they will get. Example: Locking 5 VSW for 4 years yields 5 iVSW locking; 5 VSW for 1 year yields 1.25 iVSW. Then the amount of iVSW will start to decrease in the users wallet till it becomes 0. After the period has finished the tokens become fully unlocked and available in the user's wallet.

VSW and iVSW tokens.

The VSW token itself has utility, revenue and governance benefits.

The emission rate gradually reduces over time until a total of 1,000,000,000 VSW will be in circulation.

The distribution of VSW heavily favours those that are farming and supporting the platform with liquidity.

Hybrid Burning Mechanism

We have implemented a mechanism that will ensure VSW is regularly bought back and distributed to iVSW holders. For example:

"Deposit Fees" & "VSW Fees"

1% Deposit fee will be charged on selected Normal and Boosted farms & pools (temporarily only)*;
80% of the "Deposit Fee" will be used to Buyback VSW and then distributed it back to iVSW holders;
20% of the "Deposit Fee" will be held for VSW Development & Marketing

Audited and KYC

Audited by Solidity Finance

KYC by APE O'CLOCK

Roadmap

Stage 1

✔ DEX: Staking, trading, and farming.

✔ Audit: Audited by Solidity Finance.

✔ KYC: KYC done and approved by Ape O'Clock.

Info/Analytics: Create an info-analytics page for the swap.

Stage 2

Additional farming pools: New and exclusive farming pools.

Partnerships: Partner with other projects

Team: Expand the team

Chart: Integrate a chart within the swap

Wallet: We are creating our very own non-custodial wallet

Zapping: Introducing zapping feature for LPs

Multisig: Having a Multisig to insure transparency.

Stage 3

Moving all farms to boosted farms: Let the bribe wars begin.

V2: Release version 2 of the DEX with our very own unique UI and features.

Leveraged Trading: V2.

Cross-chain: Going Cross-Chain

VENERA SWAP

Thank you!
